

Flat Flex Conveyor Belts

Overview

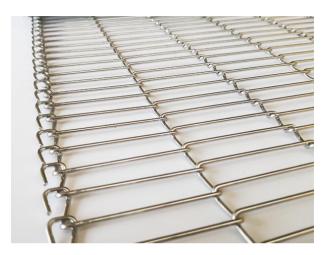

Flat Flex Conveyor Belts are also known as Enrober conveyor belts. The flat flex conveyor belt is constructed by several loop wires and then be formed a different edge. The simple structure makes it economical and lightweight. It can help to save costs and reduce downtime. Flat Flex Conveyor Belts are used in many industries. The belts have a lightweight single-layer construction and are positively driven by sprockets. Flat Flex Conveyor Belts are made of stainless steel wire of spring wire. Wire diameters vary from 0.8 to 3.0 mm. Pitches from 4 mm until 2000 mm, and belt widths from 10 mm until 3 meters, also we can make all the (non-standard) dimensions too. The Flat Flex Conveyor Belts have an open structure (70 – 86 % open) and are frequently used in cooling, baking, drying, heating, decorating, battering and packing machines for light products. The Flat Flex Conveyor Belts can be made for straight conveyors and for curve conveyors.

The largest proportion of open-mesh area available up to 86% Easy to clean, clean-in-place design No-slip, positive drive Very low belt mass Smallest diameter end rolls and drive rolls

Positive driven for accurate tracking Curved rod network belt to suit different machines

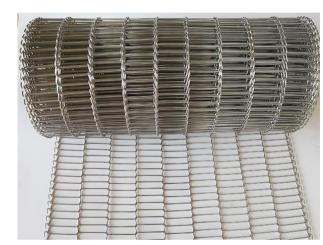

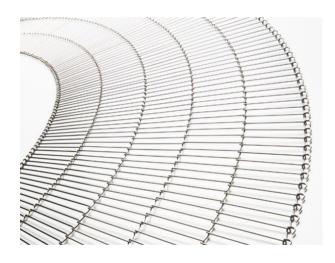

Belt Types

Flat Flex Conveyor Belts are normally driven by toothed sprockets, made of stainless steel or plastic. These sprockets are made to fit the belt and are adapted to the diameter you wish.

Flat Flex Conveyor Belts for curve conveyor

Edge Availability

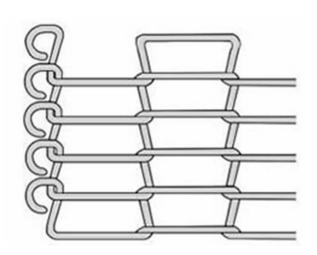

Flat Flex Conveyor Belts are available in three edge Loop Types.

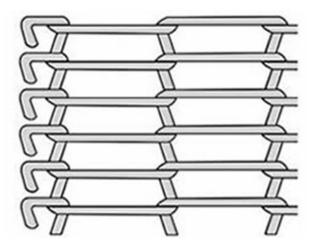

- 1. With a C-shaped Edge, reduce the ratio of catching and tangling by the belt edge.
- 2. With a Single Loop Edge, the most popular wire mesh belt edge finish. It is available for wire diameter 1.27 mm or above
- 3. With a Double Loop Edge, supplied for enrober belts.

Diverse combinations of pitch, wire diameter, mesh length and side finishing create a wide range of fit-for-purpose wire mesh conveyor belts.

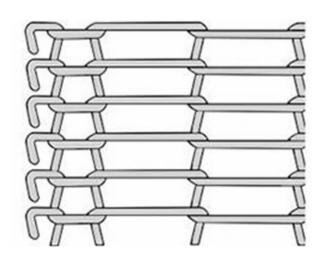

Single Loop Edge

Double Loop Edge

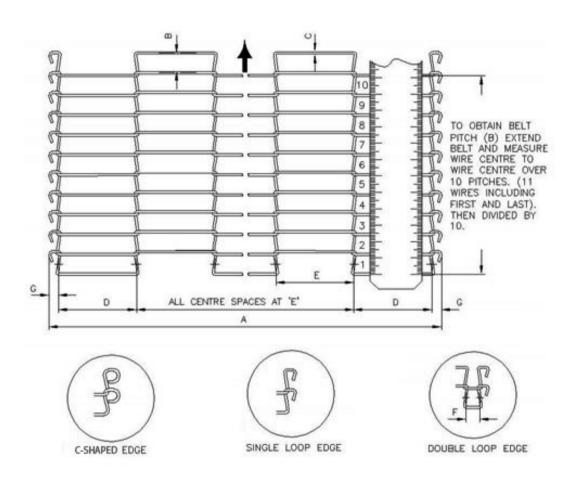

Material Availability

Flat Flex Conveyor Belts are available in a wide variety of materials, the standard is 304 stainless steel. Other materials available include 316 stainless steel, various carbon steel, and high temperature performance materials.

Material	Maximum Wire Operating Temperature °C	
Carbon Steel	550	
304 Stainless Steel	750	
316 Stainless Steel	800	
316L Stainless Steel	800	

Specifications

A: WIDTH (TOTAL) (mm)

C: WIRE DIAMETER (mm)

E: CENTRE SPACE WIDTH(S) (mm)

G: SINGLE LOOP SPACE WIDTH (mm)

B: PITCH (mm)

D: FIRST SPACE WIDTH (mm)

F: DOUBLE LOOP SPACE WIDTH (mm)

		Specifications of Flat Flex Conveyor Belts					
Wire diameter (mm)	Pitch (mm)	Open area (%)	Edge type				
0.9	4.24	77	Single/ double				
0.9	5.64	82	Single/ double				
1.0	5.5	79	Single/ double				
1.0	5.6	79.5	Single/ double				
1.27	4.3	67	Single				
1.27	5.5	73	Single/ double				
1.27	6.0	76	Single/ double				
1.27	6.35	77	Single/ double				
1.27	7.26	80	Single/ double/ C-shape				
1.40	6.40	76	Single/ C-shape				
1.60	7.26	75	Single/ double/ C-shape				
1.83	12.00	81	Single				
1.83	12.70	82	Single/ C-shape				
2.08	9.60	75	Single/ C-shape				
2.35	12.70	78	Single/ C-shape				
2.35	20.32	85	Single				
2.80	12.70	72	Single/ C-shape

NOTE: Custom specification is available if you can't find the suitable size.

Applications

The Flat Flex Conveyor Belts are frequently used in installations whereby food products undergo a certain process. You could thereby think of Garden / steaming / cooking / baking / frying / grilling but also of draping with chocolate or sprinkling with pips and/or seeds. Flat Flex Conveyor Belts are furthermore frequently used for take-over sets whereby products move from one installation/transporter to the other.

Flat flex conveyor belts are used in the food industry for the production of the following products: small dessert, fish products, pizza, vegetables, bread, flour, cakes, meat, candy, potatoes, biscuits, chocolate, nuts, and fruit.

- Transport
- Frying
- Dough Rolling
- Breading
- Sterilization
- Architectural Mesh
- Side Shifting
- Crumbing
- Glazing
- Sieving
- Heating
- Cooling
- Drainage
- Enrobing

- Turning
- Baking
- Battering
- Shrink Wrapping
- Soldering
- Shuttling
- Collating
- Searing
- Preparation
- Cooking
- Drying
- Coating
- Freezina
